Setting Up the User Machines

2 - Setting Up the User Machines (Windows Client)

Install the ".iso" file for the Windows Client by selecting "Create New Virtual Machine".

We are going to do a Custom Install. Select the drive, then click new. Same as for the Windows Server. We can set up the two clients at the same time.

Don't forget to remove the floppy disks after installation.

We are going to get to a screen that asks us if we want to sign in a Microsoft account. Here, we want "Domain join instead"

Kaku_Client_1 - Robbi_Lucci-Castle. Password: "Password1".

Kalifa_Client_2 - Blueno : "Password1"

Then, lets install VMware tools. Do a "Complete" install.

Search "View PC Name" > Change pc name > rename it to whatever you want (I changed mine to KAKU and KALIFA).
